Cyber Managed Services

Technology alone cannot fully protect against a determined, persistent, attacker. Human expertise complements technology to offer flexibility, ingenuity, and focus—especially against advanced, multi-stage attacks, and for response-related activity.

However, it is difficult and costly to find, hire, train and retain security experts. Internal teams need a trusted partner to monitor their network around the clock with a proactive, analyst-driven approach that uses the latest threat intelligence.

Cyber Managed Services from Resillion:

- Managed Detection and Response (MDR) SOC
- Endpoint detection and response
- Managed security awareness
- Threat and vulnerability monitoring and management

Resillion combines industry-recognised cyber security expertise, leading technology, and an unparalleled knowledge of attackers to help minimise the impact of a breach.

Global threat intelligence and expertise drives detection and guides our analysts' hunting and investigation activities to reveal even the most sophisticated attacker. We take advantage of our in-house offensive security team (or Red Team) to build and improve our threat identification and detection capabilities.

Security analysts provide a comprehensive assessment of attacker activity along with customised recommendations, delivering the context needed to understand threats, assess risk, and take definitive action. Our dedicated Digital Forensics and Incident Response team help to remediate issues as and when they arise.

How it Works

Using a best-in-class technology stack to provide real-time visibility across the enterprise, including ICS and cloud infrastructure, Resillion's analysts leverage adversary, victim, and machine-based threat intelligence to detect and investigate threats.

You are notified immediately when evidence of compromise has led to an investigation. You can track the status of such investigations via a secure portal while our analysts continue to work the incident to completion. You also receive a detailed report that provides threat context along with remediation recommendations.

- Proactive Hunting
- Advanced Threat Detection
- Identify and Validate Priority Alerts
- Full Incident Scoping
- Rapid Response
- Remediation Guidance
- Access to Intelligence and Expertise

By outsourcing cyber security to a managed security service provider, you'll benefit from cost savings, improved efficiency, and an upgraded security posture. All enhancing your ability to do what you do best.

Focus on your organisation's operations whilst we focus on protecting it.
