Build in inclusion and impact

with Accessibility Testing

Accessibility is no longer optional in a world where digital experiences shape everything. From education to employment, it's essential. Accessibility testing makes sure websites, digital products and all digital experiences are available to everyone, including people with visual, auditory, motor and cognitive impairments.

Accessible solution design goes beyond meeting legal and ethical standards to enhance usability, broaden market reach and strengthen brand reputation.

From a business perspective, the case for accessibility is compelling. Firstly, it avoids the legal and reputational risks of non-compliance, including lawsuits, fines and public backlash. Then globally, people with disabilities and their extended networks represent over $13 trillion in disposable income. Every inaccessible interaction is a missed opportunity to engage this vast market.

Plus, accessibility best practices such as semantic HTML, alt text and keyboard navigation often improve usability for all users, not just those with disabilities. This leads to better user experiences, higher engagement and improved SEO performance.

By 'shifting left' and embedding accessibility early in the development lifecycle organisations can avoid costly retrofits and make sure their service meets all their clients' needs.

▶ Our solution

Our Accessibility Testing services are designed to support this shift. We help clients define their accessibility strategy, align with global standards and implement robust testing frameworks.

Our services include automated audits, manual testing with assistive technologies and real-user validation by individuals with lived experience of disability. We integrate accessibility into CI/CD pipelines, agile sprints and design reviews to deliver continuous validation and improvement.

Our team of certified testers and accessibility advocates work closely with developers, designers and product owners to identify issues early and resolve them efficiently.

Whether you're launching a new platform or remediating an existing one, using our services means that your digital products will be compliant, inclusive, intuitive, customer-centric and future-ready.

Here's what sets our accessibility services apart:

Key features

- **Shift-left for early assurance**
  Testing early helps catch accessibility gaps in foundational components, reducing rework and improving quality.

- **Real-world assistive tech scenarios**
  Validates usability with screen readers, voice navigation and alternative input devices.

- **Cross-platform and device testing**
  Delivers consistent accessibility across browsers, devices and operating systems.

- **Compliance with global standards**
  Aligns your products with WCAG, ADA, EAA and regional laws to reduce legal risk and promote inclusive design.

- **Ongoing monitoring and maintenance**
  We offer the continuous support, re-testing and revisions essential to keeping your digital assets accessible as content and standards evolve.

- **Market expansion and inclusive reach**
  Accessibility opens your brand to over one billion people worldwide with disabilities. Tap into an underserved market and demonstrate true inclusion.

- **Strengthened brand reputation**
  Partnering with us shows your commitment to diversity, inclusion and social responsibility. Build a brand that people respect and trust.

- **Component and design system reviews**
  We audit your design systems, pattern libraries, and reusable UI components to embed accessibility at the source and reduce technical debt across your products.

- **Shift-right observability**
  Our post-release monitoring catches regressions and uses real-world feedback to improve accessibility continuously.

- **Risk visibility across the supply chain**
  We evaluate your third-party components and vendor deliverables for accessibility compliance.

Our approach and ways of working

We begin every project with a detailed discovery session to understand your platforms, audiences and internal workflows.

From there, we tailor our accessibility testing strategy to suit your goals, kicking off a one-time audit, full-scale remediation or ongoing compliance support, as appropriate.
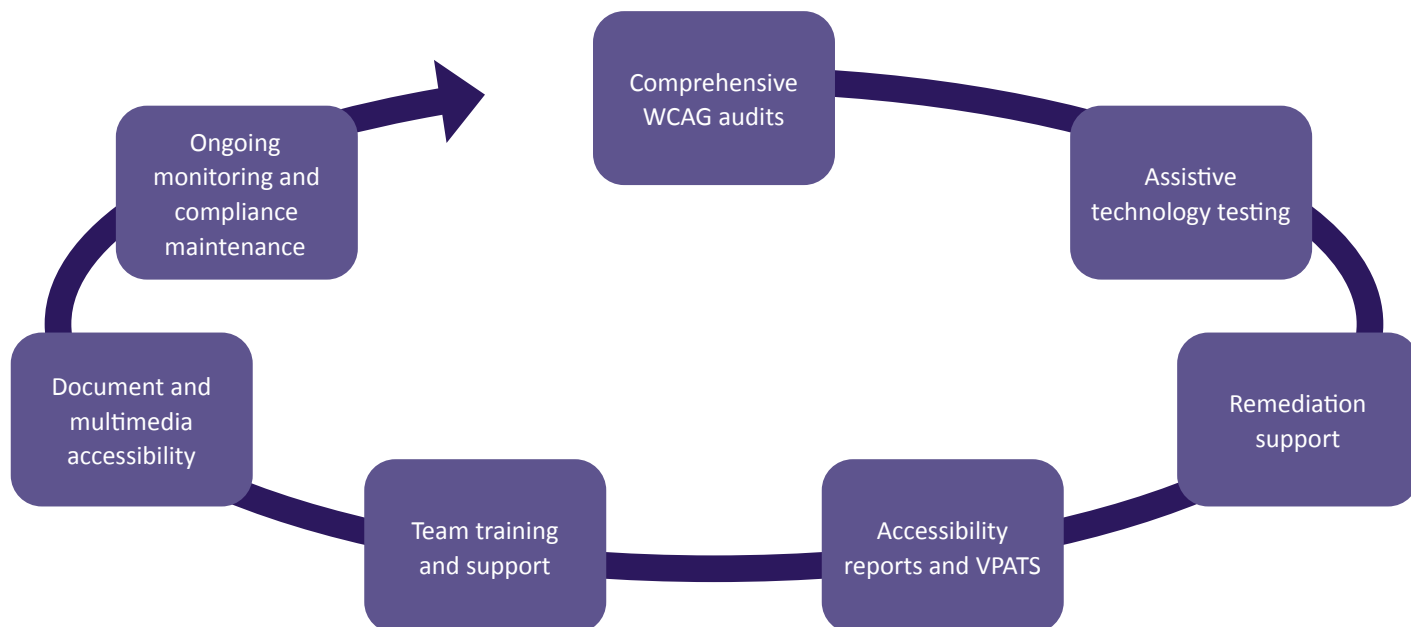

We deliver complete and accurate assessments by blending manual testing by certified accessibility professionals with proven automation tools. Many services stop at reporting issues, but we go further, guiding your teams on how to fix, verify and prevent them in future releases.

A core strength of our approach is how we integrate accessibility into your existing development lifecycle. Our experts collaborate directly with your designers, developers, QA teams and content creators, providing support via design reviews, code evaluations and accessibility stand-ups.

Beyond testing and remediation, we offer tailored accessibility training programmes to empower your teams to confidently implement accessibility.

Whether it's a hands-on workshop for developers, a content strategy session for marketers or executive briefings for leadership, we make accessibility practical and actionable across your organisation. We focus on helping you foster a culture of inclusion and digital responsibility while we deliver compliance support.

Ultimately, we're more than a service provider; we're your long-term accessibility partner. Partner with us to transform accessibility from a challenge into a competitive advantage.

Assure. Secure. Innovate.

Comprehensive WCAG audits

Assistive technology testing

Ongoing monitoring and compliance maintenance

Remediation support

Document and multimedia accessibility

Team training and support

Accessibility reports and VPATS

Ready to make your digital presence accessible to all?
